

Séminaire de matrices, cordes et géométries aléatoires

Mercredi 26/06/2019, 16h00-17h00

Orme des Merisiers Salle Claude Itzykson, Bât. 774

String theory and black hole observations

Bert Vercoe

ITF, Leuven

In this talk I will discuss ongoing efforts on connecting insights from quantum black holes in string theory with current gravitational wave research (in two directions). And yes, we will touch upon fuzzballs too.
